

javax::swing::JDialog

```
classDiagram
    class JDialog["javax::swing::JDialog"]
    class NewProgramDialog["gui.NewProgramDialog"]
    NewProgramDialog --|> JDialog
```

The diagram shows a class hierarchy. At the top is a white box representing the superclass 'javax::swing::JDialog'. It has two empty compartments below the name. Below it is a grey box representing the subclass 'gui.NewProgramDialog'. This box has three compartments: the top one contains the class name, the middle one is empty, and the bottom one contains the method signature '+ NewProgramDialog()'. A blue arrow with an open triangle head points from the subclass box up to the superclass box, indicating inheritance.

gui.NewProgramDialog

+ NewProgramDialog()
